Donna Deegan

You will not find a candidate for mayor that is more thoroughly in support of the goals of the North Florida Green Chamber. Doing what's right for our people and planet is also what's good for our local economy.

Jacksonville is already behind the curve for implementing the kind of green practices citywide that are essential to preserving our city, our land investments, and our quality of life. The environment is changing, and like all great cities, when confronted with the forces of nature, we must adapt to it as responsively as other cities have had to adapt to earthquakes in their buildings and permitting, and the way that Florence is having to adapt to the rising waters and sinking grounds of the historic city.

My administration will be committed to saving the financial and experiential wellbeing of the city by reviewing zoning, building regulations and land use policies, while also incorporating sustainability throughout our city government decision making, policies, and assets. I look forward to working with the North Florida Green Chamber to pursue these joint goals.

City Council At-Large Group 5.

Charles Garrison

I'm all in for working with the North Florida Green Chamber to build a greener and more sustainable future for Jacksonville. As a member of the Jacksonville Environmental Protection Board and Chair of the Water Committee, I've seen firsthand the impact that environmentally-conscious policies can have on our city. I know that growing our economy and taking care of our environment go hand in hand. I'll be your partner in creating policies that encourage eco-friendly businesses and practices. Let's talk about tax breaks for green companies, pushing for clean energy, and rewarding businesses that care about our planet. Plus, I want to join forces with you to improve our infrastructure. We can work on transportation systems that cut down on emissions and make our city more walkable and bike-friendly.

Together, we'll make sure Jacksonville's growth benefits everyone - our people, our environment, and our economy - for generations to come.

I believe it is vital to protect our natural resources as we progress with our future. It is crucial that we protect areas of our city like Black Hammock Island and Pumpkin Hill from over development. The stripping of the land for development in our city needs to stop and a new process implemented to protect wetlands and buffers.

The other area that needs to be implemented is the "Dark Skies Initiative" All of the city's outdoor lighting systems, (parks, stadiums, and venues) need to comply and eliminate Light pollution. Many cities in Florida, and around the country are implementing this pollution requirement.

I will always be supportive of ways to protect our environment as we move forward with responsible progress.

As my campaign logo suggests, I believe that our environment is one of the most important aspects of our City. The river connects us all, and brought settlers to the region, creating a robust economy and City. Today, we need to ensure that we aren't ignoring the assets that have helped us flourish.

As a councilmember I fully intend to pursue goals such as building out the remainder of the Emerald Trail, advocating for a revised version of the "River Accord," encouraging bike/pedestrian access in our neighborhoods, and supporting new construction that encourages carbon neutral and energy efficiency.

Jacksonville has so much growing to do, and if we accept the same blueprint we've used for years we will be holding ourselves back. As I'm sure you all know the new economy will be green, and we must have a government that engages in bringing green policies to the forefront. With your help, we can all make sure it happens.

SAFE NEIGHBORHOODS – Our City must have safe neighborhoods. First responders deserve fair compensation and benefits. JSO has a staffing deficiency when compared to our peer cities. The Taxation, Revenue, and Utilization of Expenditures Commission passed my plan to fully fund the police on August 4, 2022. It adds 148 officers annually over 8 years and provides better trained law enforcement officers. It is funded by growth in our tax base without increasing taxes.

SMART GROWTH – Our City must accommodate growth. Land use policies can foster growth with development density and use existing infrastructure for effective, efficient, and resilient growth. Transit Oriented Development aligned with existing railroad rights of way create higher density with pedestrian scale development and commuter rail. This approach adds more housing units with improved affordability, better resiliency, and protects environmentally sensitive areas. The JEA must diversify its power generation portfolio to meet increased demand.

FISCAL RESPONSIBILITY – Our City must control tax burdens and spending. Economic development incentives should have transparency, reflect public priorities, and optimize investment returns. We currently generate adequate financial resources to fund essential urban services. Our millage rate should remain stable to provide a solid financial foundation for our city.

Supporting environmentally friendly policies that improve and protect our natural resources is important for the City of Jacksonville. Our neighbors want to be able to live, work and play in a socially and environmentally responsible city. I previously served on the Duval County Soil and Water Conservation District and worked to do just that.

Climate change is real, and we must do what we can to protect the environment. If elected to the City Council, I will support policies that aim to reduce the effects of global climate change and create a more sustainable community.

We need to leave our community better than we found it for the next generation; we all deserve quality air, water, and land.
